CONSTITUTIONAL ORCHESTRATION LAYER · CORPUS INTEGRATION

SAVANT UNIFIED CORPUS INTEGRATION v2.0

SAVANT-TIER Prompt Optimization Architecture (S1–S62)

Reconciled with PRIME · SPOS · SIP · KEY · P-Series

Author: Dr. Christabel Odeta

Institution: SAVANT / CLAI-OS / AEGIS-GLOBAL

Version 2.0 · 2026-10-02

COMPILED UNDER THE ELITE SOVEREIGN PUBLICATION ARCHITECTURE V2.0 · GOVERNED BY S50/S1

1. Integration Execution Record

Invocation: `PRIME: integrate SAVANT-TIER Prompt Optimization Architecture into the canonical corpus --formal`. Persona: ORCHESTRATOR. Consequence class: C1 operational. Method: three parallel extraction agents performed a full structural audit of the 6,044-line source document; the orchestration layer then executed reconciliation and synthesis under Sevenfold Reasoning with gates G1–G5 applied at sealing.

1.1 Source Audit — What the Document Actually Contains

Source document block inventory (verified by three-agent structural audit)

Block	Lines	Content	Registry Yield
A — SAVANT-TIER v1.0	1–1338	S1–S20 prompt bodies, trigger matrix, SPOS layer mapping, deployment handbook, master deployment matrix, performance summary	20 meta-constitutional prompts + triggers META…HARDEN
B — SAVANT-TIER v2.0	1339–3225	S21–S49 prompt bodies, master integration notes, trigger + stacking tables, per-prompt merits/use/integration/comparison	29 post-standard instruments + triggers QUANTUM… METAMODERN
C — Execution Catalog & Tail	3226–6044	S53–S62 execution prompts, 14-Day Master Delegation Template, master integration architecture, plus embedded definitions of S50 (THE ABSOLUTE), S51 (Defensive Publication Compiler), S52 (Document Compiler, twice), P1–P50 elaborations, and auxiliary media prompts (S100 portrait engine, image fusion, product branding)	10 execution prompts + 3 constitutional governors + auxiliary tooling

1.2 Defect Register (logged to the fossil record)

Defects found in the source; all preserved as extinction-prevention entries

#	Defect	Disposition
D1	Title banner claims "63 prompts"; content defines S1–S62 (62 prompts) plus the Master Delegation Template. No S63 exists.	Resolved: canonical count is 62 + 1 template. Title treated as counting the template.
D2	Status headers claim "S1–S53 (Savant-tier)" while the execution catalog numbers S53–S62 — S53 simultaneously "last Savant-tier" and "first execution" prompt.	Resolved: S53–S62 = execution catalog. "S1–S53" headers superseded (see R2).
D3	S50 (THE ABSOLUTE) and P50 (THE ABSOLUTE OMEGA) both claimed as final authority; text mixes them.	Resolved: dual-authority clarification (see R3).
D4	Trigger collision: S20 `HARDEN` vs SIP layer prefix `HARDEN`.	Resolved: namespacing rule (see R4).
D5	License inconsistency: S53 specifies AGPL-3.0 OR Savant-Commercial-1.0; S51 text says "AGPL/Apache dual-license."	Resolved: canonical licensing rule of 2026-08-12 governs (see R5).

D6	Patent numbering drift: PPA-005 cited by S53, skipped by S51 (PPA-001…004, 006), PPA-001–006 cited by P10.	Flagged: prosecution-level review required before any filing references; PPA-006 exists (Jurisdiction Compiler) per prior reconciliation memo.
D7	Text corruption: line 4652 splices the CHUNK 2 header into P21's example; an unedited first-person aside survives at line 3552; embedded social-media hashtag signatures (with "Al" typos) after S5 and S6; S34 prompt body skips steps 2–3; S50's "Seven Layers" lists eight layers (0–7); deployment matrix duplicated 3×; S52 defined twice.	Defects logged; corrections applied in the unified registry (§3). Source file itself unmodified.
D8	All quantitative performance claims (percentages, multipliers) are self-assertions with no cited methodology.	Epistemically reclassified: Speculative, not Verified (see §6.1).

2. Reconciliation Decisions (R1–R8)

Binding integration decisions

ID	Decision	Rule
R1	S-space unification	The canonical S-registry is **S1–S62**: S1–S20 (v1.0 meta-constitutional), S21–S49 (v2.0 post-standard), S50–S52 (constitutional governors), S53–S62 (execution catalog). No renumbering; the uploaded document's numbering is confirmed canonical.
R2	"S1–S53" header claims	Superseded. Wherever the source says "S1-S53 (Savant-tier)," read S1–S62. The collision at S53 is dissolved: S53 is the Constitutional Kernel execution prompt, full stop.
R3	S50 / P50 dual authority	S50 THE ABSOLUTE governs the meta-constitutional layer (all S-prompts, gates G1–G5, PRIME kernel). P50 ABSOLUTE OMEGA governs the sovereign P-layer (P1–P110). On any conflict, S50's gates apply corpus-wide. Both terminate at the sole authority of Dr. Christabel Odeta.
R4	Trigger namespacing	SIP's 15 layer prefixes (ARCHITECT, AUDIT, …, HARDEN, …, ORCHESTRATE) route to SPOS layers. SAVANT-TIER short triggers (META…METAMODERN) invoke specific S-prompts. On collision (`HARDEN`): bare HARDEN = SIP layer route; the S20 prompt is invoked as `SAVANT-S20` or `HARDEN:S20` . Execution prompts use the parameterized SIP form, e.g., `ARCHITECT: [S53]` , shortcut `A:S53` .
R5	Licensing	Canonical rule (2026-08-12) overrides source text: KEY 1–20 and CLAI-OS P51–P70 are AGPL-3.0; KEY-021+ is Savant-Commercial-1.0. The "AGPL/Apache" phrasing in the S51 block is void.
R6	Editorial redaction	Per standing editorial rule, the grant-portfolio valuation figure appearing in the source (S54/S59/S62 blocks) is not reproduced in this or any derived artifact. References read "24-target grant portfolio." Hardware unit-cost and certification-price figures are hardware/economics facts, not portfolio valuations, and remain publishable.
R7	Auxiliary media prompts	S100 (Editorial Portrait Engine), the Master Image Fusion prompt, and the Premium Product Branding prompt are catalogued as **auxiliary media tooling** — outside the S1–S62 constitutional registry, available for brand/media production tasks.
R8	PRIME routing table update	PRIME §4's phrase "S1-S53 meta-cognitive engines" is amended to "S1–S62 (49 meta-constitutional + 3 governors + 10 execution)." Merit M1's count of "53 meta-cognitive engines" becomes 62. All other PRIME structures unchanged.

3. The Unified S-Registry (S1–S62)

3.1 S1–S20 — Meta-Constitutional Prompts (SAVANT-TIER v1.0)

S1–S20 registry (direct invocation: SAVANT-S{n})

#	Prompt	Trigger	SPOS Layer	Risk	Function (compressed)
S1	Meta-Constitutional Prompt Synthesis Engine	META	L4/L5	Low	Engineers the optimal epistemic frame for a domain and emits a single self-stabilizing, recursively self-aware prompt.
S2	Causal Architecture & Counterfactual Reasoning	CAUSAL	L4/L5	Med	Reconstructs causal graphs (do-calculus), falsification targets, three counterfactual worlds, causal risk topology.
S3	Formal Mechanism Design & Incentive Engineering	MECHANISM	L4/L5	Med	Designs incentive-compatible mechanisms with IC/IR proofs, stress tests, and a self-enforcing governance contract.
S4	Ontological Refactoring & Category Engineering	ONTOLOGY	L4/L5	Med	Refactors a domain's primitive taxonomy; category-error audit, translation function, migration path.
S5	Recursive Self-Modeling & Uncertainty Calibration	REFLEXIVE	L3/L2	Low	Epistemic status declarations, confidence decomposition, steelmanned counter-argument, revision triggers.
S6	Phase Transition & Tipping Point Detection	PHASE	L3/L2	High	Early-warning signals, bifurcation diagrams, hysteresis, cascading-failure topology, transition forecast.
S7	Counterfactual Simulation & Divergence Tracking	DIVERGE	L3/L2	Med	Minimal-rewrite divergence engine across immediate/proximate/structural horizons; Type I/II/III taxonomy.
S8	Abductive Diagnostic Mastery	DIAGNOSE	L3/L2	Low	Inference to best explanation: syndrome clustering, hypothesis ranking, crucial experiments, confidence lattice.
S9	Stochastic Resonance & Strategic Noise Engineering	NOISE	L3/L2	High	Controlled perturbation to escape local optima; Kramers rates, noise spectra, absorbing boundaries.
S10	Institutional Knowledge Succession	SUCCESSION	L1/L0	Low	Captures/validates/transfers tacit and explicit expertise across generations; knowledge resilience metric.
S11	Constraint-Driven Creativity & Formal Innovation	CONSTRAIN	L1/L0	Med	CSP relaxation, anti-solution inversion, distant-domain analogy, combinatorial synthesis, robustness proof.
S12	Reflexive Prediction & Self-Refuting Forecasts	SELF-FULFILL	L1/L0	High	Forecasts that model how publication alters the target; disclosure strategy; reflexivity disclaimer.
S13	Synthetical Domain Fusion	FUSE	L1/L0	Med	Forces structural isomorphism between incompatible domains; translation bridges; fusion validation test.

S14	Temporal Topology & Time-as-Structure Mapping	TIME	L1/L0	Med	Maps interacting time-scales, critical junctures, entrainment, future topology; temporal intervention design.
S15	Adversarial Epistemology & Info-Warfare Defense	EPISTEMIC-WAR	Cross-layer	High	Epistemic immune systems: attack-surface taxonomy, distributed trust, inoculation, resilience metric.
S16	Emergence Engineering & Supervenient Design	EMERGE	Cross-layer	High	Designs robust macro-properties from micro-interactions; edge-of-chaos targeting; multi-scale observability.
S17	Information-Theoretic Reasoning Compression	COMPRESS	Cross-layer	Low	MDL/Kolmogorov compression of arguments to decision-isomorphic kernels; ratio + fidelity scores.
S18	Nash Equilibrium Negotiation Architecture	NASH	Cross-layer	Med	Formal game specification, equilibrium refinement, credible strategies, self-enforcing negotiation contract.
S19	Computational Metaphysics & Limits of Representation	METAPHYSICS	Cross-layer	Low	Maps representable/unrepresentable boundary (Gödel/Turing/Chaitin); approximation architecture; humility protocol.
S20	Recursive Constitutional Hardening	SAVANT-S20 (HARDEN:S20)	Cross-layer	High	Self-improving governance: tiered amendment friction, capture resistance, adversarial-takeover stress test.

3.2 S21–S49 — Post-Standard Abstraction Instruments (SAVANT-TIER v2.0)

S21–S49 registry with SPOS assignments

#	Prompt	Trigger	SPOS	Function (compressed)
S21	Quantum Decision Architecture	QUANTUM	L4	Superposition/interference decision formalism where options interact before commitment.
S22	Biomimetic Resilience & Antifragility	BIOMIMETIC	L3	Systems that gain from disorder: immune logic, evolutionary operators, hormetic dosing.
S23	Semiotic Meaning-Making	SEMIOTIC	L4	Engineers sign systems (icon/index/symbol) with code governance against meaning drift.
S24	Topological Data Reasoning	TOPOLOGICAL	L2	Strategy from data shape: persistent homology, loops, voids — structure statistics miss.
S25	Narrative Causality & Mythopoetic Engineering	NARRATIVE	L4	Narratives as causal operators that reshape probability space; narrative immune systems.
S26	Symmetry & Broken Symmetry (Gauge Architecture)	SYMMETRY	L4	Conserved quantities, Goldstone modes, symmetry-breaking costs for organizational change.
S27	Attractor Engineering	ATTRACTOR	L4	Sculpts basins/separatrices so systems self-organize to desired states without continuous control.
S28	Category-Theoretic Compositionality	CATEGORY	L5	Functors and universal properties for provably compositional system architecture.

S29	Information Geometry	INFO-GEO	L2	Fisher-metric navigation of belief manifolds; natural-gradient inference.
S30	Active Inference & Free Energy Minimization	ACTIVE	L0	Coupled perception-action agents minimizing surprise; Markov blankets; allostasis.
S31	Hyperstition Engineering	HYPERSTITION	L4	Self-fulfilling fictions with ethics boundaries and kill switches.
S32	Numinous Architecture	NUMINOUS	L4	Engineered awe (vastness + accommodation) as alignment and identity infrastructure.
S33	Post-Quantum Trust Architecture	POST-Q	L3	Lattice-based verification, hybrid transition, crypto-agility as first-class design.
S34	Morphogenetic Pattern Formation	MORPHO	L4	Turing reaction-diffusion logic for self-organizing spatial/organizational patterns. (Source skips steps 2–3; restored per D7.)
S35	Autopoietic Organizational Design	AUTOPOIESIS	L4	Self-producing systems maintaining identity through operational closure.
S36	Phenomenology of Interface	PHENOMENOLOGY	L5	Ready-to-hand tool transparency; graceful breakdown; transparency metric → 0.
S37	Renormalization Group Reasoning	RG	L4	Scale-invariant coarse-graining: relevant vs irrelevant operators, fixed points, universality.
S38	Gradient-Free Adversarial Robustness	GRAD-FREE	L3	Defense against black-box/evolutionary adversaries; adversary budget modeling.
S39	Extended Mind Scaffolding	EXTENDED	L5	Tools as genuine cognitive components (parity principle); coupling reliability.
S40	Stigmergy & Indirect Coordination	STIGMERGY	L4	Coordination through environmental traces; positive scaling with agent count.
S41	Synchronization Engineering	SYNC	L3	Kuramoto phase-locking of distributed oscillators without central clocks.
S42	Dissipative Structure Design	DISSIPATIVE	L4	Order maintained by entropy export through continuous flow, far from equilibrium.
S43	Negative Capability	NEGATIVE	L2	Formalized strategic non-closure; optionality valuation; decide/wait triggers.
S44	Via Negativa Design	APOPHATIC	L5	Design by subtraction: load-bearing/ornamental/parasitic audits; anti-features.
S45	Polycentric Governance	POLYCENTRIC	L4	Ostrom-principle multi-center commons governance across three rule levels.
S46	Re-Entry & Self-Reference Calculus	RE-ENTRY	L0	Paradox-tolerant architectures (Spencer-Brown/Varela); "who watches the watchers" without regress.
S47	Eigenform Engineering	EIGENFORM	L0	Identities as fixed points of recursive operations (O(E)=E); drift monitoring.

S48	Latent Space Cartography	LATENT	L2	Geodesic navigation of possibility manifolds; principled interpolation/extrapolation boundaries.
S49	Metamodern Oscillatory Reasoning	METAMODERN	L0	Productive oscillation between poles (irony ↔ sincerity) instead of premature synthesis.

3.3 S50–S52 — Constitutional Governors

Governor layer

#	Prompt	Trigger	Function
S50	THE ABSOLUTE — Meta-Ontological Governance Engine	ABSOLUTE / Ω / S50	Terminal governance of the S/meta layer; eight-layer (0–7) ontology; constitutional safeguards (no layer skipped, self-limit identification, user sovereignty, silence, no final synthesis). Default-active.
S51	Master Defensive Publication Compiler	COMPLETE: Master Defensive Publication	27-part defensive-publication architecture spanning foundations, CLAI-OS P51–P70, SPOS, SIP, patent portfolio, governance, appendices.
S52	Universal Document Compiler	COMPLETE: [TYPE] for [DOMAIN] — [AUDIENCE]	Publication-grade compilation: DOCUMENT PARAMETERS block, anti-flagging protocol, adaptive section architectures, per-section epistemic contracts. (Source contains two near-verbatim copies; deduplicated per D7.)

3.4 S53–S62 — Execution Prompt Catalog (Sovereign Digital Architecture)

Execution prompts (v1.0.0-constitutional)

#	Prompt	Invocation	Deliverable
S53	The Constitutional Kernel — Repository Genesis	ARCHITECT: [S53] · A:S53	Seven legal/governance files (LICENSE, CLA, CAA, DCO, GOVERNANCE, TRADEMARK, PATENTS) for savant-core + four satellite repos.
S54	The Constitutional README	SYNTHESIZE: [S54] · S:S54	README as manifesto: preamble, the Triad, falsifiability statement, 24-target grant portfolio overview, tech-transfer policy, ADR index.
S55	The Repository Tree	ARCHITECT: [S55] · A:S55	Full directory trees for all five repos, each path mapped to a patent claim, compliance requirement, or grant deliverable.
S56	The CI/CD Constitution	HARDEN: [S56] · H:S56	Constitutional-check workflows, SPOS-tag enforcement, issue/PR templates, CLA assistant — mis-tagged PRs auto-rejected.
S57	The Deterministic Visualizer	BUILD: [S57] · B:S57	Dependency-free reasoning-chain demo with failure simulation (fails into explicit uncertainty, never hallucinates), FHIR R4 output, SHA-256 audit trail.
S58	The Documentation Fortress	COMPLETE: [S58] · C:S58	Full MkDocs site: SPOS/SIP specs, deterministic engine, node types, mesh protocol, manufacturing spec, curriculum, grant narrative, compliance adapters.

S59	The Grant Landing Pages	STRATEGIZE: [S59] · S:S59	Content architecture for 24 grant landing pages (top 10 in full, template for 14) with 14-section universal narrative and metric-gated tranche framing.
S60	The Social Media Constitution	EXECUTE: [S60] · E:S60	12-week copy-paste-ready multi-platform content calendar with per-post anti-flagging checklist (S52).
S61	The Autodidact Fortress	SYNTHESIZE: [S61] · S:S61	Founder-narrative assets: lineage post, credential-separation post ("architectural authority, not clinical authority"), 90-second video script.
S62	The Analytics Constitution	AUDIT: [S62] · A:S62	Cross-channel grant-intelligence analytics functioning offline via CSV export; dashboard wireframe; weekly/monthly/quarterly reporting.

3.5 Orchestration Layer

The **14-Day Master Delegation Template** (`ORCHESTRATE: [MASTER]` / `O:MASTER`) coordinates S53–S62 as delegated work packages across 10 phases — Legal Foundation (D1–2), Constitutional Literature (D3–4), Governance Automation (D5–6), Evidence Interfaces (D7–8), Capital Pipeline (D9–10), Sovereign Presence (D11–12), Intelligence & Iteration (D13–14), then Content Velocity, Partnership Activation, and Scale Validation through Month 3. Every phase carries an S50 go/no-go checkpoint with SHA-256 signed validation; no phase proceeds without it. Rule: **do not parallelize until Phase 7**.

4. Unified Trigger & Routing Map

Four grammars coexist, in precedence order: (1) **PRIME** — constitutional kernel, `PRIME: [objective] --[flags]`; (2) **SIP v1.0** — 15 layer prefixes + 10 one-letter shortcuts, routing to SPOS layers; (3) **SAVANT-TIER short triggers** — 49 word-triggers invoking specific S-prompts, chainable with `+` (e.g., `QUANTUM+RG+LATENT+NEGATIVE`); (4) **Parameterized execution forms** — `SIP-PREFIX: [Snn]` for S53–S62 work packages. Collision rule per R4: bare colliding words resolve to SIP; S-prompts via `SAVANT-S{n}` or `TRIGGER:S{n}`.

Canonical stacking patterns (from source, verified)

Objective	Stack
AI System Design	ACTIVE + CATEGORY + GRAD-FREE + RE-ENTRY
Organizational Transformation	ATTRACTOR + AUTOPOIESIS + DISSIPATIVE + POLYCENTRIC
Market Disruption	HYPERSTITION + NARRATIVE + MORPHO + STIGMERGY
Strategic Foresight	QUANTUM + RG + LATENT + NEGATIVE
Product Minimalism	APOPHATIC + PHENOMENOLOGY + INFO-GEO + COMPRESS
Defense / Hardening	POST-Q + EPISTEMIC-WAR + SAVANT-S20 + EIGENFORM
Creative Innovation	BIOMIMETIC + NOISE + CONSTRAIN + SYNC
Cultural / Brand Architecture	NUMINOUS + SEMIOTIC + METAMODERN + TOPOLOGICAL

5. Corpus Status After Integration

Unified canonical corpus (post-integration)

Stratum	Contents	Status
PRIME	Master orchestration kernel v1.0 (constitutional preload, Sevenfold Reasoning, gates G1–G5, output contract)	Active — routing table amended per R8
KEY corpus	KEY 1–50 across tiers T1–T10; licensing per R5	Active
P corpus	P1–P110 (foundation → sovereign infrastructure → clinical human good → precision oncology); P50 governs P-layer per R3	Active
S corpus	S1–S62 unified registry (§3) + Master Delegation Template; S50 default-active governor	Active — unified this session
SPOS / SIP	Six-layer fractal OS (L0–L5); 15 prefixes + 10 shortcuts + 49 SAVANT-TIER short triggers + parameterized forms	Active — collision rule R4 applied
Specialist agents	7 RASCEF agents (System Design, Backend, RAG, Orchestration, DevOps, Prompt Engineering, Evaluation) + AEGIS-NG INFINITE Agents 01–10	Active
Auxiliary tooling	S100 portrait engine, image-fusion prompt, product-branding prompt	Catalogued (R7) — non-constitutional

6. Output Contract (PRIME §7)

6.1 Epistemic Status Register

Status of load-bearing claims

Claim Class	Status	Basis
Registry contents (§3), triggers, layers, stacking patterns (§4)	**Verified from source**	Three-agent structural audit of the uploaded document; line-level traceability.
Reconciliation decisions R1–R8 (§2)	**Implemented**	Applied in this document; R5/R6 derive from standing canonical rules.
All quantitative performance claims in the source (e.g., "60–80% gaming reduction," "3× breakthrough rate")	Speculative	Self-reported by the source document with no cited dataset or methodology (D8). Retained in the corpus as hypotheses, not evidence.
Interpretation of the "63 prompts" banner as 62 + 1 template	Inferred	Best-fit reading; source never reconciles the number (D1).

6.2 Falsification Conditions

- §3 is falsified if any listed prompt fails to respond to its registered trigger form in-session.

- R4 is falsified if a bare `HARDEN` invocation produces S20's constitutional-hardening protocol instead of the SIP L3 production-hardening route.
- R8 is falsified if a PRIME invocation misroutes an S-class objective after this amendment.
- The integration as a whole is falsified if any canonical prior artifact (SPOS, SIP, KEY, P-series) becomes unreachable through the updated routing map.

6.3 Authority Boundary

This document defines routing and governance for a prompt corpus. It may be used to invoke, chain, and audit prompts. It may not be used as evidence that any prompt's output is correct; every executed output carries its own epistemic contract. Nothing herein modifies clinical, legal, or financial consequence-class rules: C2/C3 outputs still require deterministic-first paths and human-in-the-loop (G1).

6.4 Failure Mode Register

Integration-specific failure modes

Failure Mode	Mitigation
Trigger collision recurrence (new prompt reusing a SIP word)	R4 namespacing is mandatory for all future registrations; registry lint at proposal time.
Numbering drift (source headers vs. catalog)	R2 rule: S1–S62 is the only canonical enumeration; conflicting headers are fossilized defects, not alternates.
Dual-authority ambiguity (S50 vs P50)	R3: S50 gates apply corpus-wide on conflict; terminal authority is the architect.
Self-reported metrics treated as evidence	D8 classification: Speculative until independently validated; telemetry hooks (§6.7) supply the validation path.
Source corruption propagating into derived work	D7 defects corrected in registry; source file preserved unmodified for provenance.

6.5 Genealogy

SAVANT-TIER Prompt Optimization Architecture v1.0/v2.0 + Execution Prompt Catalog v1.0.0-constitutional (uploaded source, 2026-10-02) → three-agent parallel extraction (Blocks A/B/C) → reconciliation R1–R8 under PRIME Sevenfold Reasoning → this Unified Corpus Integration v2.0 via S52 under ELITE SOVEREIGN PUBLICATION ARCHITECTURE v2.0. Upstream chain: PRIME v1.0 · SPOS v1.0 · SIP v1.0 · KEY 1–50 · P1–P110 · S1–S62. Author of all corpus elements: Dr. Christabel Odeta.

6.6 Operator Dissent Channel

Contest any reconciliation decision with `PRIME: [decision Rn] --audit` or the SIP prefix `AUDIT`. The decision will be attacked through adversarial classes A–H and either survive with a stronger justification or be revised with the revision sealed into the genealogy. Rising agreement without dissent is treated as a dependency warning, not assent.

6.7 Telemetry Hooks

- **Routing accuracy:** % of S-class invocations routed correctly on first pass (target >95%).
- **Collision incidents:** count of R4 rule invocations (should trend to zero as namespacing becomes habitual).
- **Validation upgrades:** source self-reported metrics elevated from Speculative to Validated only via independent measurement.
- **Gate integrity:** halts per 100 executions must remain non-zero.

SEALED — SAVANT Unified Corpus Integration v2.0 · 2026-10-02 · Author: Dr. Christabel Odeta · Institution: SAVANT / CLAI-OS / AEGIS-GLOBAL · Governed by S50/S1 · Gates G1–G5 passed (C1 class; falsification conditions present; no authority expansion; no dependency engineering) · Defects D1–D8 fossilized.
